

Problem–Solution Fit Canvas

Project: Incident Lifecycle Automation in ServiceNow

Maximum Marks: 2 Marks

1. CUSTOMER SEGMENT(S)

Primary: Service Desk Agents

Secondary: End Users, Level 2 Support and Change Management

Users who create, handle, investigate or track IT incidents.

2. JOBS-TO-BE-DONE / PROBLEMS

- Log incidents consistently
- Classify category, subcategory, impact, urgency and priority
- Assign/reassign to the right support group
- Investigate, resolve and document incidents
- Track SLA, changes and child incidents
- Reuse knowledge from resolved incidents

3. TRIGGERS

- New IT incident is reported
- Service disruption affects a user or business service
- Urgent or high-impact incident
- SLA deadline is approaching
- Level 2 support or emergency change is required
- Recurring issue needs reusable knowledge

4. EMOTIONS: BEFORE / AFTER

Before: frustrated, uncertain, concerned about delays and SLA breaches.

After: confident, informed, in control and satisfied that ownership and resolution are clear.

6. CUSTOMER CONSTRAINTS

- Incomplete or unclear incident information
- Time pressure and SLA deadlines
- Dependency on other support teams
- Different user roles/access levels
- Manual coordination consumes time

9. PROBLEM ROOT CAUSE

- Multiple reporting and communication channels
- Inconsistent classification and assignment
- Knowledge, SLA and related records are not always visible together
- Manual coordination can delay escalation and resolution
- Resolution information may not be reused consistently

10. YOUR SOLUTION

ServiceNow Incident Lifecycle Automation

- Structured incident creation and classification
- Knowledge / Agent Assist support
- Assignment and Level 2 escalation
- SLA and activity tracking
- Emergency change and child-incident linking
- Resolution documentation and knowledge article creation

5. AVAILABLE SOLUTIONS

- Email/phone-based incident reporting
- Manual ServiceNow incident entry and updates
- Manual knowledge-base searching
- Direct coordination with support teams

These can work, but may require more manual tracking.

7. BEHAVIOUR

- Report or receive an IT issue
- Create and classify the incident
- Search knowledge / use Agent Assist
- Assign, reassign or escalate to Level 2
- Add work notes and resolution details
- Link a change or child incident when required
- Monitor SLA and close

8. CHANNELS OF BEHAVIOUR

8.1 ONLINE

ServiceNow web interface, Service Operations Workspace, email/notifications, knowledge search and incident dashboards.

8.2 OFFLINE

Phone/in-person communication and direct coordination with support teams that may lead to incident creation or updates in ServiceNow.
